As a small instrument, pipettes are widely used in laboratories. After decades of development, pipettes are now more comfortable, user-friendly, and safer for handling hazardous chemicals. Multi channel pipettes are an ideal choice for high precision, high efficiency, and reproducibility in high-throughput experiments.

The new quality series of pipettes launched by VIOX includes single channel and 8-channel multifunctional pipettes, designed ergonomically to provide a comfortable grip and prevent fatigue during prolonged operation; The range of measurement ranges from a minimum of 0.1ul to a maximum of 10ml, which can meet the pipetting needs of different levels from microliters to milliliters. Whether it is adding small amounts of reagents or transferring large amounts of liquids, it can be easily handled; In terms of precision, the New Quality series pipettes have extremely high accuracy and repeatability, ensuring that the volume of each transfer is precise and error free, providing reliable assurance for your experimental results.

The New Quality series pipettes are made of high-quality corrosion-resistant materials, which are easy to clean and maintain. The operation is very simple, and calibration and adjustment are also very convenient. They can meet the diverse application needs of laboratories and Reliable assistants in laboratory work.
